

## ZMM ACCESSORY BRACKET

This bracket is designed to be used with the Galaxy mobile mount and will provide a high angle of tilt for floor mounting of the Galaxy III, V, or other new models that may be introduced with the same physical size.

A picture of a transceiver mounted with this accessory bracket is shown.

The base of the ZMM bracket has two holes and it is to be mounted on the floor with the large metal tapping screws that were originally supplied with the mobile mount. The mobile mount is then attached to the top of the AMM bracket, using the three screws, washers, and nuts provided.

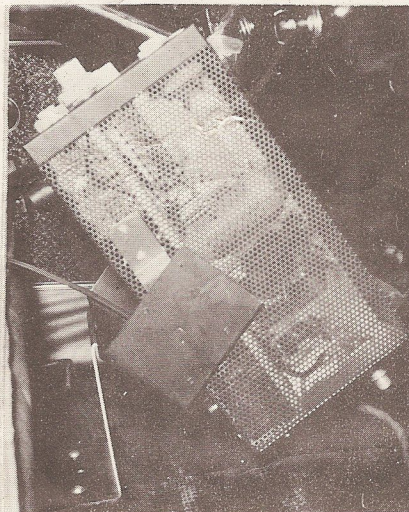

If the transceiver is now at too great a vertical angle, this angle may be adjusted to some extent by re-positioning the "ears" of the mobile mount on the side of the transceiver cabinet.

### PARTS LIST

Heavy metal "Z" bracket (1)  
Bolts (3)  
Washers (3)  
Nuts (3)

Refer to the manual on Galaxy transceivers for information on warranty and correspondence with the factory.
