

GALAXY SC-550
"SPEAKER CONSOLE"

The "Speaker Console" is housed in a cabinet matching the appearance of the "Galaxy GT-550 transceiver." It contains a PM type speaker, with a nominal impedance of 8 ohms. This unit is supplied with a connecting cable terminated in a phono plug that connects directly to the audio output jack on the GT-550. The jack on the front of the "Speaker Console" is for head phones.

You will notice there are six holes on the bottom of the cabinet. These are used when the AC-400 (AC Power Supply) is mounted in the speaker console.

On receipt, the speaker should be checked for signs of obvious or hidden damage. The units were carefully packed when delivered to the carrier and any malfunction or physical damage must be attributed to damage enroute. If any damage is found, proper claims should be instituted with the carrier.

Correspondence relating to this item should be addressed:
